SixCase SC1330/1430

AED cabinet with red emergency button

Quick release opening procedure
Shock and waterproof
Corrosion resistant
24V Low voltage

SixCase SC1330/1430

SixCase high secured AED wall-cabinet

The AED (Automatic External Defibrillator) is an important device for primary help in case of a cardiac arrest. It is of a vital importance that the AED is protected, secured and available 24/7 for immediate assistance. The SixCase cabinet gives the ultimate protection and provides day and night availability for the AED.

SixCase SC1330/1430

Robust design of aluminium (SC1330) or high impact stainless steel (SC1430), with a protective coating. The corrosion resistant materials provide an optimal protection for the AED.

The cabinet is equipped with a 24V heating element, active ventilation and a polycarbonate impact-proof window.

By operating the red emergency button, the lower section is released and the AED can then easily be removed. After opening, the red LED light will illuminate, accompanied by an intermittent alarm.

The SixCase should be connected to a 230V or 110V power supply, which the enclosed adapter can convert to 24V.

Technical Specifications

Type	SC1330/1430
Weight	9 kg/15 kg
Dimensions, closed	56(h)x41(w)x26(d)cm
Dimensions, open	92(h)x41(w)x26(d)cm
Shock and waterproof	✓
Cooling	✓
Heating	✓ -15 °C (optional -25 °C)
Corrosion resistant	✓ AW-5754 Alu or AISI304 SST
Window	✓ Impact-proof polycarbonate
Installation kit	✓ Included (wood & stone)

Power supply

Power	24V Transformer included

Functions

Opening	Emergency push button
Light	✓ LED red and blue
Acoustic alarm	✓ +/- 95dB intermittent
